Human Computer Confluence Andrea Gaggioli,Alois Ferscha,Giuseppe Riva,Stephen Dunne,Isabell Viaud-Delmon,2015-12 Human computer confluence is a research area aimed at developing an effective, even transparent, bidirectional communication between humans and computers, which has the potential to enable new forms of sensing, perception, interaction, and understanding. This book provides a groundbreaking collection of chapters exploring the science, technology and applications of HCC, bringing together experts in neuroscience, psychology and computer science.

Brain Art Anton Nijholt,2019-05-25 This is the first book on brain-computer interfaces (BCI) that aims to explain how these BCI interfaces can be used for artistic goals. Devices that measure changes in brain activity in various regions of our brain are available and they make it possible to investigate how brain activity is related to experiencing and creating art. Brain activity can also be monitored in order to find out about the affective state of a performer or bystander and use this knowledge to create or adapt an interactive multi-sensorial (audio, visual, tactile) piece of art. Making use of the measured affective state is just one of the possible ways to use BCI for artistic expression. We can also stimulate brain activity. It can be evoked externally by exposing our brain to external events, whether they are visual, auditory, or tactile. Knowing about the stimuli and the effect on the brain makes it possible to translate such external stimuli to decisions and commands that help to design, implement, or adapt an artistic performance, or interactive installation. Stimulating brain activity can also be done internally. Brain activity can be voluntarily manipulated and changes can be translated into computer commands to realize an artistic vision. The chapters in this book have been written by researchers in human-computer interaction, brain-computer interaction, neuroscience, psychology and social sciences, often in cooperation with artists using BCI in their work. It is the perfect book for those seeking to learn about brain-computer interfaces used for artistic applications.

DAFX Udo Zölzer,2011-03-16 The rapid development in various fields of Digital Audio Effects, or DAFX, has led to new algorithms and this second edition of the popular book, DAFX: Digital Audio Effects has been updated throughout to reflect progress in the field. It maintains a unique approach to DAFX with a lecture-style introduction into the basics of effect processing. Each effect description begins with the presentation of the physical and acoustical phenomena, an explanation of the signal processing techniques to achieve the effect, followed by a discussion of musical applications and the control of effect parameters. Topics covered include: filters and delays, modulators and demodulators, nonlinear processing, spatial

effects, time-segment processing, time-frequency processing, source-filter processing, spectral processing, time and frequency warping musical signals. Updates to the second edition include: Three completely new chapters devoted to the major research areas of: Virtual Analog Effects, Automatic Mixing and Sound Source Separation, authored by leading researchers in the field . Improved presentation of the basic concepts and explanation of the related technology. Extended coverage of the MATLABTM scripts which demonstrate the implementation of the basic concepts into software programs. Companion website (www.dafx.de) which serves as the download source for MATLABTM scripts, will be updated to reflect the new material in the book. Discussing DAFX from both an introductory and advanced level, the book systematically introduces the reader to digital signal processing concepts, how they can be applied to sound and their use in musical effects. This makes the book suitable for a range of professionals including those working in audio engineering, as well as researchers and engineers involved in the area of digital signal processing along with students on multimedia related courses.

The Science of String Instruments Thomas D. Rossing,2010-12-15 Thomas D. Rossing String instruments are found in almost all musical cultures. Bowed string instruments form the backbone of symphony orchestras, and they are used widely as solo instruments and in chamber music as well. Guitars are used universally in pop music as well as in classical music. The piano is probably the most versatile of all musical instruments, used widely not only in ensemble with other musical instruments but also as a solo instrument and to accompany solo instruments and the human voice. In this book, various authors will discuss the science of plucked, bowed, and hammered string instruments as well as their electronic counterparts. We have tried to tell the fascinating story of scientific research with a minimum of mathematics to maximize the usefulness of the book to performers and instrument builders as well as to students and researchers in musical acoustics. Sometimes, however, it is difficult to “translate” ideas from the exact mathematical language of science into words alone, so we include some basic mathematical equations to express these ideas. It is impossible to discuss all families of string instruments. Some instruments have been researched much more than others. Hopefully, the discussions in this book will help to encourage further scientific research by both musicians and scientists alike. 1.1 A Brief History of the Science of String Instruments Quite a number of good histories of acoustics have been written (Lindsay 1966, 1973; Hunt 1992; Beyer 1999), and these histories include musical acoustics.

Video in Qualitative Research Christian Heath,Jon Hindmarsh,Paul Luff,2010-03-12 Provides practical guidance for both students and academics on how to use video in qualitative research, how to address the problems and issues that arise in undertaking video-based field studies and how to subject video recordings to detailed scrutiny and analysis.

Gesture-Based Communication in Human-Computer Interaction Antonio Camurri, Gualtiero Volpe, 2011-04-02

Research on the multifaceted aspects of modeling, analysis, and synthesis of human gesture is receiving growing interest from both the academic and industrial communities. On one hand, recent scientific developments on cognition, affect/emotion, on multimodal interfaces, and on multimedia have opened new perspectives on the integration of more sophisticated models of gesture in computersystems. On the other hand, the consolidation of new technologies enabling “disappearing” computers and (multimodal) interfaces to be integrated into the natural environments of users are making it realistic to consider tackling the complex meaning and subtleties of human gesture in multimedia systems, enabling a deeper, user-centered, enhanced physical participation and experience in the human-machine interaction process. The research programs supported by the European Commission and several national institutions and governments individuated in recent years strategic fields strictly concerned with gesture research. For example, the DG Information Society of the European Commission (www.cordis.lu/ist) supports several initiatives, such as the “Disappearing Computer” and “Presence” EU-IST FET (Future and Emerging Technologies), the IST program “Interfaces & Enhanced Audio-Visual Services” (see for example the project MEGA, Multisensory - pressive Gesture Applications, www.megaproject.org), and the IST strategic - jective “Multimodal Interfaces.” Several EC projects and other funded research are represented in the chapters of this book.

A wider range of applications can benefit from advances in research on gesture, from consolidated areas such as surveillance to new or emerging fields such as therapy and rehabilitation, home consumer goods, entertainment, and audiovisual, cultural and artistic applications, just to mention only a few of them.

Voice & Void Thomas Trummer, 2007 Edited by Thomas Trummer. Foreword by Harry Philbrick.

Computational Analysis of Sound Scenes and Events Tuomas Virtanen, Mark D. Plumbley, Dan Ellis, 2018-08-18 This book presents computational methods for extracting the useful information from audio signals, collecting the state of the art in the field of sound event and scene analysis. The authors cover the entire procedure for developing such methods, ranging from data acquisition and labeling, through the design of taxonomies used in the systems, to signal processing methods for feature extraction and machine learning methods for sound recognition. The book also covers advanced techniques for dealing with environmental variation and multiple overlapping sound sources, and taking advantage of multiple microphones or other modalities. The book gives examples of usage scenarios in large media databases, acoustic monitoring, bioacoustics, and context-aware devices. Graphical illustrations of sound signals and their spectrographic representations are presented, as well as block diagrams and pseudocode of algorithms.

Bridging People and Sound Mitsuko Aramaki, Richard Kronland-Martinet, Sølvi Ystad, 2017-09-15 This book constitutes the thoroughly refereed post-conference of the 12th International Symposium on Computer Music Modeling and Retrieval, CMMR 2016, held in São Paulo, Brazil, in July 2016. The 22 full papers presented were carefully reviewed and selected from

40 submissions. This year's conference theme "Bridging People and Sound" aimed at encouraging contributions from artists and listeners on the one side and audio and music technology researchers on the other.

Sound, Music, and Motion Mitsuko Aramaki, Olivier Derrien, Richard Kronland-Martinet, Sølvi Ystad, 2014-12-04 This book constitutes the thoroughly refereed post-conference proceedings of the 10th International Symposium on Computer Music Modeling and Retrieval, CMMR 2013, held in Marseille, France, in October 2013. Language, Music and Interaction Martin Orwin, 2013-11-01 Similarities between language and music have tantalised theorists over many years. The papers of this book explore the case for leaving behind static views of language and music in which they are formally describable independently of their practice, t

An Introduction to Audio Content Analysis Alexander Lerch, 2012-11-05 With the proliferation of digital audio distribution over digital media, audio content analysis is fast becoming a requirement for designers of intelligent signal-adaptive audio processing systems. Written by a well-known expert in the field, this book provides quick access to different analysis algorithms and allows comparison between different approaches to the same task, making it useful for newcomers to audio signal processing and industry experts alike. A review of relevant fundamentals in audio signal processing, psychoacoustics, and music theory, as well as downloadable MATLAB files are also included. TransArts Stephan Hilge, Roman Pfeffer, Nita Tandon, 2013 TransArts is a novel approach in the art education system, a course whose content and forms are adapted to the dynamics of art today: the separation of the theory and practice of art - while maintaining all the differences - is seen as arbitrary and even obsolete. TransArts teaches the common and distinctive features of theory and practice and takes account of the fact that different artistic disciplines are mutually dependent and reinforcing but are also in competition with one another. Art is taught and studied not only through traditional forms of teaching but in particular through communication, inventiveness, reflection and the exchange of ideas between teachers and students. This publication documents the activities of TransArts from 2010 to 2013. (Gerald Bast)

Signals, Systems and Sound Synthesis Martin Neukom, 2013 The subject of this book is the synthesis and treatment of sound by computer. Using illustrations, animations, sound examples and sample programs, it introduces the most important techniques of sound and score synthesis and explains the technical and mathematical principles necessary for understanding

them. After reviewing fundamentals of acoustics, the author describes system and signal theory and introduces the programs and programming languages used in the book. The traditionally important synthesis techniques are described in detail, as are various nonlinear synthesis techniques and synthesis by physical modeling. The concluding chapters of the book deal with the projection of sound in space and with the use of algorithmic and stochastic procedures in computer music. The appendix contains a survey of basic mathematical principles, various tables for reference and a detailed index. The included CD contains the entire text of the book, as well as additional chapters and explanations, sound examples, animations illustrating dynamic processes and many sample computer programs.

Landscapes of Learning Maxine Greene, 1978 Special 2018 Edition From the new Introduction by Janet L. Miller, Teachers College, Columbia University: Maxine Greene never claimed to be a visionary thinker. But forty years later, her trepidations detailed throughout 1978's *Landscapes of Learning* now appear unnervingly prescient. Witness and treasure *Landscapes* as evidence of her matchless abilities to inspire myriad educators and students worldwide. "I would suggest that there must always be a place in teacher education for 'foundations' people, whose fundamental concern is with opening new perspectives on the many faces of the human world." —Maxine Greene The essays in this volume demonstrate clearly that Maxine Greene is herself an example of the kind of "foundations" specialist she hopes to see: someone who can stimulate, inform, and bring new insights to teachers, students, curriculum planners, administrators, policymakers—indeed all those concerned with education in its broadest sense. These essays, a number of them based on lectures presented to various professional organizations, reveals her dedication to learning and teaching, as it reveals her belief in the potential of each individual person. A philosopher whose orientation is largely existential and phenomenological, she seeks to demystify aspects of today's technological society, to question taken-for-granted notions of social justice and equality, and to elucidate conflicts between youth and age, the poor and the middle class, minorities and Whites, male and female. As a humanist, she calls for self-reflectiveness, wide-awakeness, and personal transformation within the context of each person's own lived world—each one's particular landscape of work, experience, and aspiration. Recognizing the multiple realities that compose experience, the many landscapes against which sense-making proceeds, the essays are grouped in four sections: intellectual and moral components of emancipatory education; social issues and their implications for approaches to pedagogy; artistic-aesthetic considerations in the making of curriculum; and the cultural significance of women's predicaments today. All are richly illuminated by examples; all are written with grace and passion; all will help readers achieve greater self-understanding and critical consciousness. "This is a significant book."—Phi Delta Kappan "Maxine Greene forces us to consider what we can do even in a limited way and to begin to understand where we have failed." —Cross Currents
