*Global Governance of Intellectual Property in the 21st Century* Mark Perry, 2016-05-24 This book analyses the governance foundations of innovation, brands, inventions, secrets and expression, which are the keys to a century based on

knowledge. They are reflected in legal rights that have been fermenting over centuries of national policy deliberations on intellectual property rights, constantly in flux in the face of new advances in science, but overall a trend towards greater protectionism. As countries are challenged by the strictures of international agreements, often extorted through imbalanced power relationships, they seek their own national means for beneficial differentiation from the new global norms, whilst complying with international obligations. This book deals with the outcomes of regional governance of intellectual property, which often creates ripples in the search for harmony in the laws that form the basis for the future of intellectual property. The work has contributions that come from developing and developed nations, showing a common theme of the struggle to find the balance in an area of law that often does not provide clearcut solutions to real world environments. There are many intellectual property struggles illustrated in this work: patent at the boundaries of nature and invention, the need for drug development, which is driven by profit based on the patent monopoly; copyright, the expression of original thought, seeking to maximise exposure facilitated by the internet, but a system that facilitates rampant copying; trade marks, supporting company branding, seeks to exploit global branding through naming domains names; and other areas concomitant to the globalisation of intellectual property governance, such as foreign direct investment. This book holds up a mirror to the issues of world governance of intellectual property rights in this century, asking whether the direction we are currently following is in the best interest of global citizens, and showing the divergence that constraints are stimulating on a national level.

**Improving Energy Efficiency in Commercial Buildings and Smart Communities** Paolo Bertoldi, 2020-01-14 These proceedings present fourteen peer-reviewed papers from the 10th International Conference on Improving Energy Efficiency in Commercial Buildings and Smart Communities, which was held March 21-22, 2018 in Frankfurt, Germany. This biannual conference aims to promote and diffuse the concept of energy efficiency in new and existing commercial buildings and to enlarge the market for low consumption and sustainable non-residential buildings. It also covers smart and sustainable districts, communities and cities, since energy systems efficiency and renewable energies are often optimized at the district or municipal level. The 2018 conference focused on advanced and innovative technologies to improve the energy efficiency of commercial buildings, communities and cities as well as the policies and measures by governments at various levels to improve energy efficiency. A particular focus was on Energy Service Companies (ESCOs). The conference addresses energy policy makers at international, national, and local level; academics, researchers and energy efficiency experts; ESCOs, utilities, buildings energy and environmental managers; buildings engineers and architects; and equipment manufacturers and commercial property investors.

**Manis Valuations and Prüfer Extensions II** Manfred Knebusch, Tobias Kaiser, 2014-03-20 This volume is a sequel to "Manis Valuation and Prüfer Extensions I," LNM1791. The Prüfer extensions of a commutative ring  $A$  are roughly those commutative ring extensions  $R/A$ , where commutative algebra is governed by Manis valuations on  $R$  with integral values on  $A$ . These valuations then turn out to belong to the particularly amenable subclass of PM (=Prüfer-Manis) valuations. While in Volume I Prüfer extensions in general and individual PM valuations were studied, now the focus is on families of PM valuations. One highlight is the presentation of a very general and deep approximation theorem for PM valuations, going back to Joachim Gräter's work in 1980, a far-reaching extension of the classical weak approximation theorem in arithmetic.

Another highlight is a theory of so called “Kronecker extensions,” where PM valuations are put to use in arbitrary commutative ring extensions in a way that ultimately goes back to the work of Leopold Kronecker.
