A Comprehensive Treatise on Inorganic and Theoretical Chemistry: F, Cl, Br, I, Li, Na, K, Rb, Cs Joseph William Mellor, 1922

Synthetic Methods in Drug Discovery David C Blakemore, Paul M Doyle, Yvette M Fobian, 2016-07-15 Building on key reactions presented in Volume 1, *Synthetic Methods in Drug Discovery* Volume 2 covers a range of important reaction types including organometallic chemistry, fluorination approaches and asymmetric methods as well as new and exciting areas such as Csp²-Csp³ couplings, catalytic amide bond forming reactions, hydrogen borrowing chemistry and methods to access novel motifs and monomers. This book provides both academic and industrial perspectives on key reactions giving the reader an excellent overview of the techniques used in modern synthesis. Reaction types are conveniently framed in the context of their value to industry and the challenges and limitations of methodologies are discussed with relevant illustrative examples. Moreover, key opportunities in expanding chemical space are presented, including the increasingly important syntheses that introduce three-dimensional molecular shape. Edited and authored by leading scientists from both academia and industry, this book will be a valuable reference for all chemists involved in drug discovery as well as postgraduate students in medicinal chemistry.

Ionic-Liquid-Based Aqueous Biphasic Systems Mara G. Freire, 2016-10-05 This book offers comprehensive information on the fundamentals and applications of ionic-liquid-based aqueous biphasic systems, which have predominantly (and successfully) been employed as alternative platforms for the extraction, separation and purification of diverse high-value products. The book consists of an initial introduction providing a brief overview, from fundamentals to applications, followed by nine chapters addressing the respective phase diagrams (interpretation and characterization) and remarkable examples of their applications. It also includes two final chapters focusing on recent developments in the search for more environmentally-benign and biocompatible ionic-liquid-based aqueous biphasic systems, and on the progress made to date concerning the recovery, recycling and reuse of the phase-forming components, the goal being the development of cost-effective and sustainable processes. The book offers an interesting and useful guide for a broad readership in the fields of

green chemistry, biotechnology, chemical engineering, and biochemistry, among others. Mara G. Freire is a Coordinator Researcher at CICECO - Aveiro Institute of Materials, Chemistry Department, University of Aveiro, Portugal.
