KI 2011: Advances in Artificial Intelligence Joscha Bach,Stefan Edelkamp,2011-10-01 This book constitutes the refereed proceedings of the 34th Annual German Conference on Artificial Intelligence, KI 2011, held in Berlin, Germany, in October 2011. The 32 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 81 submissions. The papers are divided in topical sections on computational learning and datamining, knowledge representation and reasonings, augmented reality, swarm intelligence; and planning and scheduling.

Artificial Intelligence with Common Lisp James L. Noyes,1992 [The book] provides a balanced survey of the fundamentals of artificial intelligence, emphasizing the relationship between symbolic and numeric processing. The text is structured around an innovative, interactive combination of LISP programming and AI; it uses the constructs of the programming language to help readers understand the array of artificial intelligence concepts presented. After an overview of the field of artificial intelligence, the text presents the fundamentals of LISP, explaining the language's features in more detail than any other AI text. Common Lisp is then used consistently, in both programming exercises and plentiful examples of actual AI code.- Back cover This text is intended to provide an introduction to both AI and LISp for those having a background in computer science and mathematics. -Pref.

Unlocking the Emotional Brain Bruce Ecker,Robin Ticic,Laurel Hulley,2024-04-22 This highly influential volume, now in a much-expanded second edition, delivers major advances for psychotherapy, all empirically grounded in memory reconsolidation neuroscience. A great increase of therapeutic effectiveness can be gained, thanks to a clear map of the brain's innate core process of transformational change—a process that does not require use of any particular system or techniques and is therefore remarkably versatile. Twenty-six case examples show the decisive ending of a vast range of major symptoms, including depression, anxiety, panic, shame, self-devaluing, anger, perfectionism, alcohol abuse, sexual aversion, compulsive eating and obesity, paralyzed self-expression, and teen ADHD—all transformed through deeply resolving

underlying disturbances such as complex trauma, lifelong oppression by systemic racism and homophobia, childhood sexual molestation, parental narcissistic domination, violent assault trauma, natural disaster trauma, and childhood traumatic aloneness and neglect. This is a transdiagnostic, transtheoretical, lucid understanding of therapeutic action, based, for the first time in the history of the psychotherapy field, on rigorous empirical knowledge of an internal mechanism of change, and it achieves a fundamental unification of the confusingly fragmented psychotherapy field: diverse systems no longer seem to belong to different worlds, because they now form a wonderful repertoire of options for facilitating the same core process of transformational change, as shown in case examples from AEDP, Coherence Therapy, EFT, EMDR, IFS, IPNB, ISTDP, psychedelic-assisted therapy, and SE. It's now clear why therapy systems that differ strikingly in technique and theory can produce the same quality of liberating change. Practitioners who value deep connection with their clients are richly rewarded by the experiential depth that this core process accesses, where no awareness had previously reached, whether sessions are done in person or via online video. It is an embarrassment of riches, because in addition we gain the decisive resolution of several longstanding, polarizing debates regarding the nature of symptom production, the prevalence of attachment issues, the operation of traumatic memory, the functions of the client-therapist relationship, the role of emotional arousal in the process of change, and the relative importance of specific versus non-specific factors.

Semantic Integration of Heterogeneous Software Specifications Martin Große-Rhode, 2013-03-09 The first book to integrate various model-based software specification approaches. The integration approach is based on a common semantic domain of abstract systems, their composition and development. Its applicability is shown through semantic interpretations and compositional comparisons of different specification approaches. These range from formal specification techniques like process calculi, Petri nets and rule-based formalisms to semiformal software modeling languages like those in the UML family.

Beginning Microsoft SQL Server 2008 Administration Chris Leiter, Dan Wood, Michael Cierkowski, Albert Boettger, 2009-04-15 SQL Server 2008 introduces many new features that will change database administration procedures; many DBAs will be forced to migrate to SQL Server 2008. This book teaches you how to develop the skills required to successfully administer a SQL Server 2008 database; no prior experience is required. The material covers system installation and configuration/architecting, implementing and monitoring security controls, configuring and managing network communications, automating administration tasks, disaster prevention and recovery, performance monitoring, optimizing and

ensuring high availability, as well as major SQL Server 2008 components including Integration Services, Reporting Services, Analysis Services, and Service Broker.

Head-Driven Phrase Structure Grammar Stefan Müller ,Anne Abeillé,Robert D. Borsley,Jean-Pierre Koenig , Head-Driven Phrase Structure Grammar (HPSG) is a constraint-based or declarative approach to linguistic knowledge, which analyses all descriptive levels (phonology, morphology, syntax, semantics, pragmatics) with feature value pairs, structure sharing, and relational constraints. In syntax it assumes that expressions have a single relatively simple constituent structure. This volume provides a state-of-the-art introduction to the framework. Various chapters discuss basic assumptions and formal foundations, describe the evolution of the framework, and go into the details of the main syntactic phenomena. Further chapters are devoted to non-syntactic levels of description. The book also considers related fields and research areas (gesture, sign languages, computational linguistics) and includes chapters comparing HPSG with other frameworks (Lexical Functional Grammar, Categorical Grammar, Construction Grammar, Dependency Grammar, and Minimalism).

Plurality and Classifiers across Languages in China Dan Xu,2013-01-01 Plural marking, numeral classifiers and reduplication constitute the main means of quantification marking in the domain of grammar. The contributions in this book focus on the typological correlation between the three different strategies for quantification, as well as on some general issues. A better understanding of the quantification strategies in the languages of China will enrich our comprehension of human language and thought. The book is expected to have an impact on the study of linguistic typology, language contact, and patterns of the evolution.

Highly Effective Therapy Len Sperry,2010-03-17 Mental health professionals and accrediting bodies have steadily been embracing competency-focused learning and clinical practice. In contrast to a skill, a competency is a level of sufficiency evaluated against an external standard. Learning to be clinically competent involves considerably more than the current emphasis on skill and micro skill training. While there are now a small number of books that describe the various clinical competencies of counseling and psychotherapy, none of these books focus on how to learn them. Highly Effective Therapy emphasizes the process of learning these essential competencies. It illustrates them in action with evidence-based treatment protocols and clinical simulations to foster learning and competency. Highly Effective Therapy is a hands-on book that promotes learning of the 20 competencies needed for effective and successful clinical practice.

Morphologie G. E. Booij, Christian Lehmann, Joachim Mugdan, 2000 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages, but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction. For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints, while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation. To attain these objectives, the series will aim for a standard comparable to that of the leading handbooks in other disciplines, and to this end will strive for comprehensiveness, theoretical explicitness, reliable documentation of data and findings, and up-to-date methodology. The editors, both of the series and of the individual volumes, and the individual contributors, are committed to this aim. The languages of publication are English, German, and French. The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks; however no inflexible pre-set limits will be imposed on the scope of each volume. The series is open-ended, and can thus take account of further developments in the field. This conception, coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care, means that there is no set time-table for the publication of the whole series. Each volume will be a self-contained work, complete in itself. The order in which the handbooks are published does not imply any rank ordering, but is determined by the way in which the series is organized; the editor of the whole series enlist a competent editor for each individual volume. Once the principal editor for a volume has been found, he or she then has a completely free hand in the choice of co-editors and contributors. The editors plan each volume independently of the others, being governed only by general formal principles. The series editor only intervene where questions of delineation between individual volumes are concerned. It is felt that this (modus operandi) is best suited to achieving the objectives of the series, namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume.
